

Blossom Gold Commences Drilling Program on the Kamma Claims, West of the Rosebud Open-Pit, Heap Leach Project

TORONTO, ON – August 31, 2026 – Blossom Gold Inc. (“**Blossom**” or the “**Company**”) (TSX: BGAU) is pleased to announce that it has commenced reverse circulation ("RC") drilling on the Company's Kamma Claims, located west of the Rosebud Project ("Rosebud" or the "Project") in Pershing County, Nevada. The program follows the Bureau of Land Management's ("BLM") approval of the Company's Notice of Intent, announced on June 3, 2026.

Highlights

- Drilling of Kamma Claims, west of the Rosebud Project, has begun ahead of schedule
- Initial 12,000-foot RC program included in the 24-month budget and focused on geophysical and structural targets
- Potential for discovery at depth due south of Hycroft’s Vortex high-grade, underground silver discovery
- Assay results are expected in Q4 2026 and will inform 2027 drilling on Kamma

“We are firing on all cylinders at Rosebud with the resources in place to continue executing our plan to confirm, expand and optimize the deposit,” stated Rick Winters, CEO of Blossom Gold. “Exploring Kamma has always been a part of that plan and it’s a breath of fresh air to see the truth stick turning ahead of schedule. We are focused on making a major mine at Rosebud, but Kamma represents the opportunity and potential for discovery and new wealth creation, true blue-sky. We look forward to reporting results as they become available in Q4 2026 and have the budget to continue drilling at Kamma should we have some luck to go with our science.”

The Kamma Claims are 100%-owned by Blossom Gold and occupy a graben setting closely analogous to the Rosebud Claim Block. The claims host the most significant historic placer production in the area and yet have seen little modern exploration, representing meaningful upside optionality for a new discovery outside the Rosebud Project. Work completed to date suggests the Kamma Claims are prospective for hosting potential primary structures that provide the plumbing for mineralization to the adjacent Hycroft Mine, including the Vortex silver discovery, which is among the most promising high-grade silver systems in the region. The 2026 Kamma Claims two-year exploration budget includes the geologic mapping and geophysics already completed, the initial RC drilling campaign now underway, and follow-up programs and drilling contingent on success, all of which were part of the Company's 24-month budget.

The initial, 12,000ft (3,660m) RC program targets aeromagnetic anomalies interpreted to represent structural conduits for mineralizing hydrothermal fluids, building on the geologic mapping, surface sampling, and airborne geophysics completed to date. Assay results from the program are expected in the fourth quarter of 2026 and will inform 2027 drilling on Kamma.

“With the aeromagnetic survey and surface mapping complete, we now have a clear structural and stratigraphic framework to test with the drill,” commented Dr. John DeDecker, VP of Exploration for Blossom Gold. “Stratigraphic and structural investigations indicate that mineralization at Rosebud occurs along conjugate fault sets within several units of the Kamma Mountain volcanics. Faults of similar orientations occur at Hycroft and based on aeromagnetic data are inferred to occur beneath sedimentary cover at Kamma. The identification of Badger Formation conglomerate rocks places the Kamma claims stratigraphically between Hycroft and Rosebud. The combination of favorable structures and stratigraphy makes Kamma a compelling target for the maiden drill program in this area.”

About Blossom Gold Inc.

Blossom is a Canadian-based precious metals exploration and development company that recently began trading on the TSX under the symbol BGAU. Blossom acquired the Rosebud Project in connection with the TSX-listing and will be focused on the exploration and development of the project. The Rosebud Project includes the former Rosebud Mine, where mining was conducted from 1997 through 2000 by the Rosebud Mining Company, a Newmont-Hecla joint venture, using underground mining methods where the mine operated at a cut-off grade of approximately 0.2 opt Au (6.8 gAu/t), when gold prices ranged from US\$250 to US\$350/oz; with mined material truck-hauled approximately 120 miles to an existing Newmont oxide mill for processing.

The current vision for the Rosebud Project is to evaluate the remaining higher-grade mineralization and the surrounding larger volume of lower grade mineralization as a potential open pit mining operation with on-site, heap-leach processing and recovery of gold and silver. The Rosebud Project currently hosts an Inferred Mineral Resource of 70.755 million tons grading 0.62gAu/t (0.018opt Au) and 6.49gAg/t (0.189opt Ag) for 1.28 million ounces of gold and 13.4 million ounces of silver. The mineral resource estimate was open pit constrained using long term gold and silver prices of US\$2,500 and US\$35 per ounce respectively. The deposit is open in all directions.

Further details on Blossom and the Rosebud Project, including the technical report titled “Mineral Resource Estimate for the Rosebud Property, Pershing County, NV, USA” by Northern Lights Mining LLC, with a report date of December 17, 2025 and an effective date of November 1, 2025, can be found under the Company’s profile on SEDAR+ at www.sedarplus.com and the Company’s website at www.blossomgold.com.

Cautionary Statement on Forward-Looking Information

This news release contains “forward-looking information” within the meaning of applicable Canadian securities legislation. All statements other than statements of historical facts included in this news release constitute forward-looking information, including but not limited to statements regarding the Company’s plans, prospects and business strategies, including its senior leadership team, its core drilling program and advancing the Rosebud Project, permitting and commencing construction, and its vision regarding the Rosebud Project. Terminology such as “plan”, “expect”, “schedule”, “estimate”, “forecast”, “intend”, “anticipate”, “believe”, “may” or “will” and similar expressions identify forward-looking information. By identifying such information in this manner, Blossom is alerting the reader that such information is subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Blossom to be materially different from those expressed or implied by such information. In addition, in connection with the forward-looking information contained in this news release, Blossom has made certain assumptions. Among the key factors that could cause actual results to differ materially from those projected in the forward-looking information are the following: the inability of Blossom to achieve any one or more of the key catalysts on the timeline expected, or at all, and any changes in the development of the business of Blossom, as well as those risk factors more generally set out in Blossom’s AIF, which is available under Blossom’s profile on SEDAR+ at www.sedarplus.com. Should one or more of these risks, uncertainties or other factors materialize, or should assumptions underlying the forward-looking information prove incorrect, actual results may vary materially from those described herein. Although Blossom believes that the assumptions and factors used in preparing, and the expectations contained in, the forward-looking information are reasonable, undue reliance should not be placed on such information, and no assurance or guarantee can be given that such forward-looking information will prove to be accurate. The forward-looking information contained in this news release is provided as of the date of this news release, and Blossom does not undertake to update any forward-looking information that is contained or referenced herein, except in accordance with applicable Canadian securities laws.
